THUNDERBEAT Type S

THUNDERBEAT Type S is the world’s first and only hybrid energy technology delivering surgical safety and instrument versatility for efficient and streamlined operations with optimal patient outcomes.

The unique hybrid technology THUNDERBEAT Type S provides:
- Reliable 7 mm vessel sealing
- Superior secondary hemostasis and spot coagulation
- Fastest-in-class cutting speed
- Optimal temperature control for reduced thermal spread
- Reduced mist generation
- Even compression force distribution when grasping tissue

SONICBEAT

SONICBEAT is based on the design of Olympus’ THUNDERBEAT in order to meet our aim of steadily developing ergonomic and multipurpose instruments for open and laparoscopic surgery.

SONICBEAT Provides:
- Reliable 5 mm vessel sealing
- Fast tissue cutting
- Sharp and blunt dissection
- Even compression force distribution when grasping tissue
- Reduced mist generation
- Minimal lateral thermal spread

Surgical Tissue Management System

Both technologies, THUNDERBEAT and SONICBEAT, are driven by the latest Surgical Tissue Management System.

This allows further efficiencies to be achieved through generator standardization across an operating department.
