

VisiGlide and VisiGlide 2

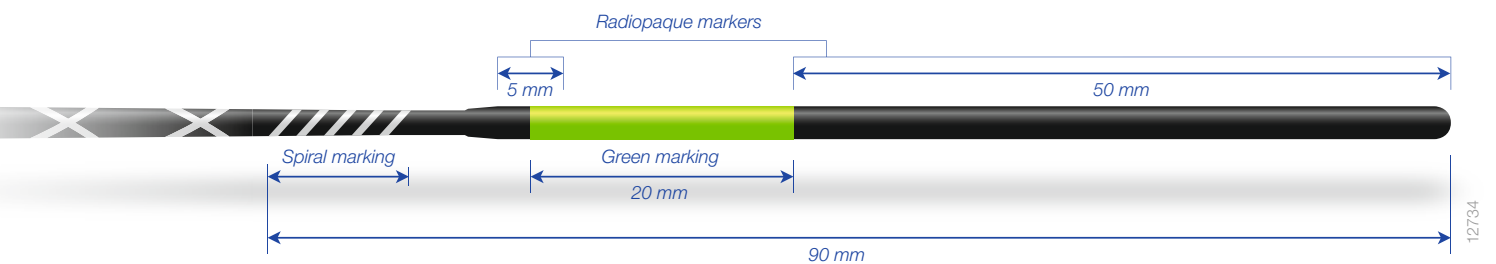

Single-Use Guidewire for ERCP

The VisiGlide Line of Guidewires

Unique 0.025-inch Guidewire Concept

With clinically proven cannulation success*, VisiGlide and VisiGlide 2 set a new standard in guidewire design, which significantly expands the range of applicable procedures.

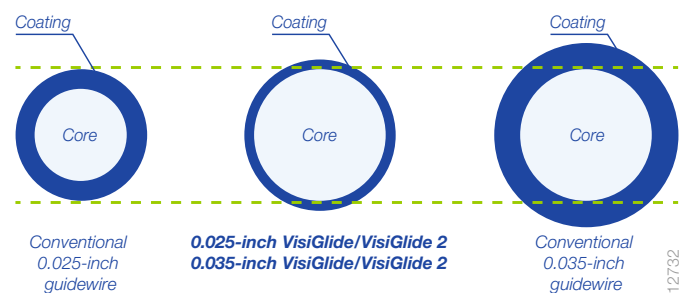

Excellent Torqueability

A special inner core achieves excellent one-to-one torque control that comes into its own during delicate procedures such as navigating biliary strictures.

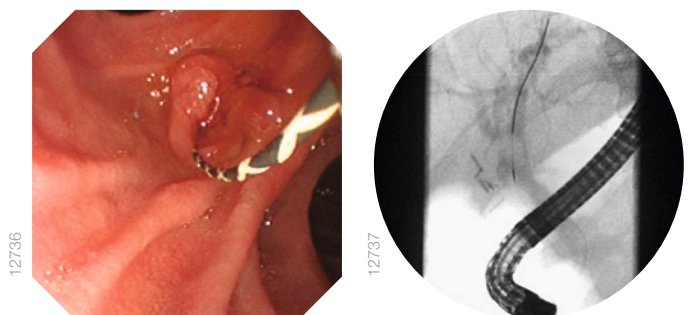

Stiffness and Flexibility

The VisiGlide and VisiGlide 2, designed in collaboration with Terumo Corporation, provide the equivalent support of a regular 0.035-inch guidewire with a 0.025-inch diameter.

Clear Endoscopic and Fluoroscopic Visibility

Endoscopic markings on both the VisiGlide and VisiGlide 2 assist seeing movement of the guidewire, while advanced fluoroscopic visibility ensures that the wires are fully visible in virtually any situation and can aid with stricture and stent measurement.

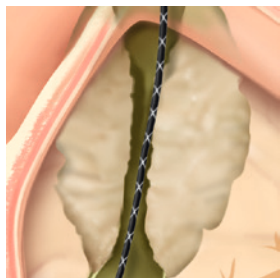

* Albert JG et al. A novel, stiff-shaft, flexible-tip guidewire for cannulation of biliary stricture during endoscopic retrograde cholangiopancreatography: a randomized trial. Endoscopy 2014; 46(10): 857-61

VisiGlide

Unprecedented Insertion Capability

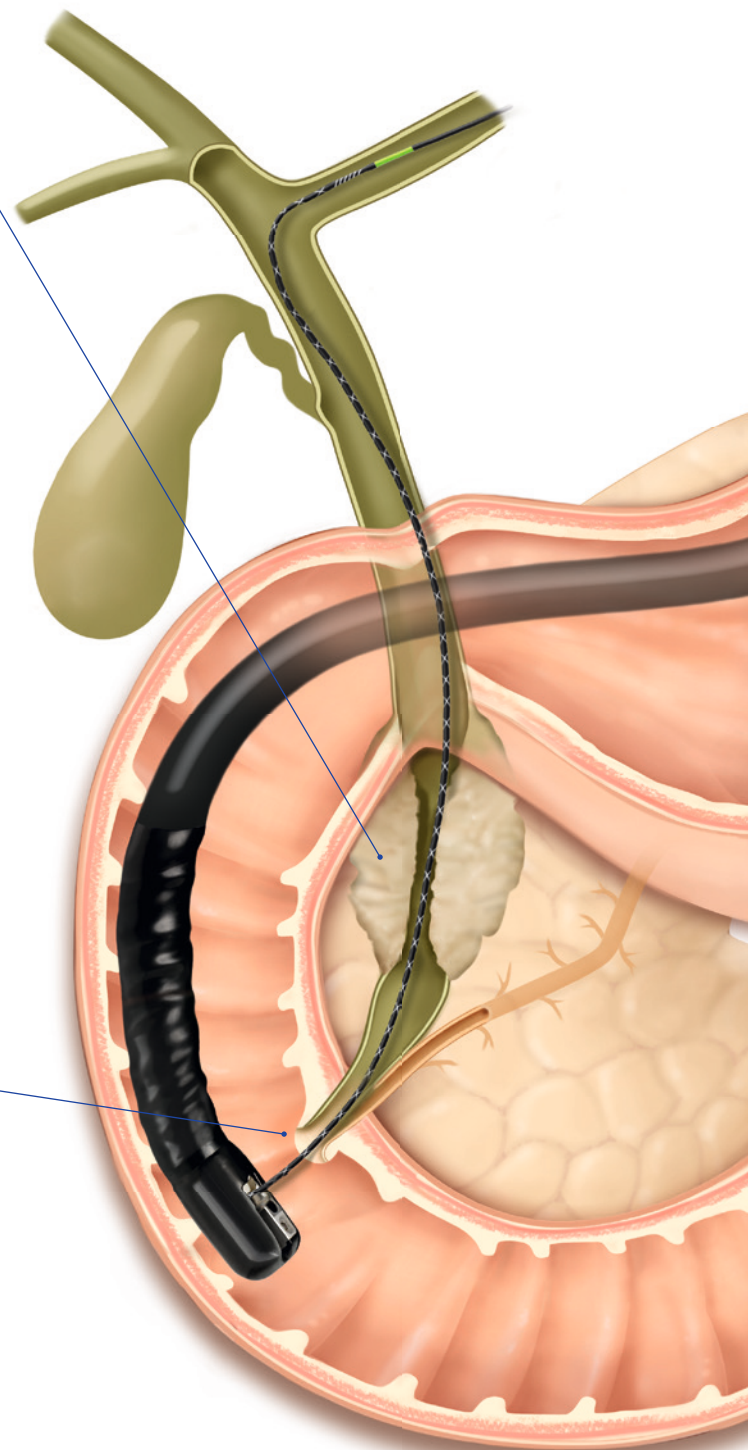

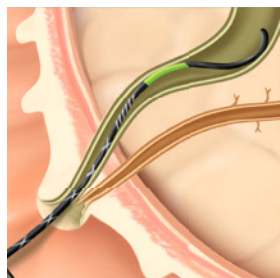

VisiGlide has been designed to provide the optimal combination of stiffness and flexibility, enabling difficult strictures to be efficiently passed and effective access maintained.

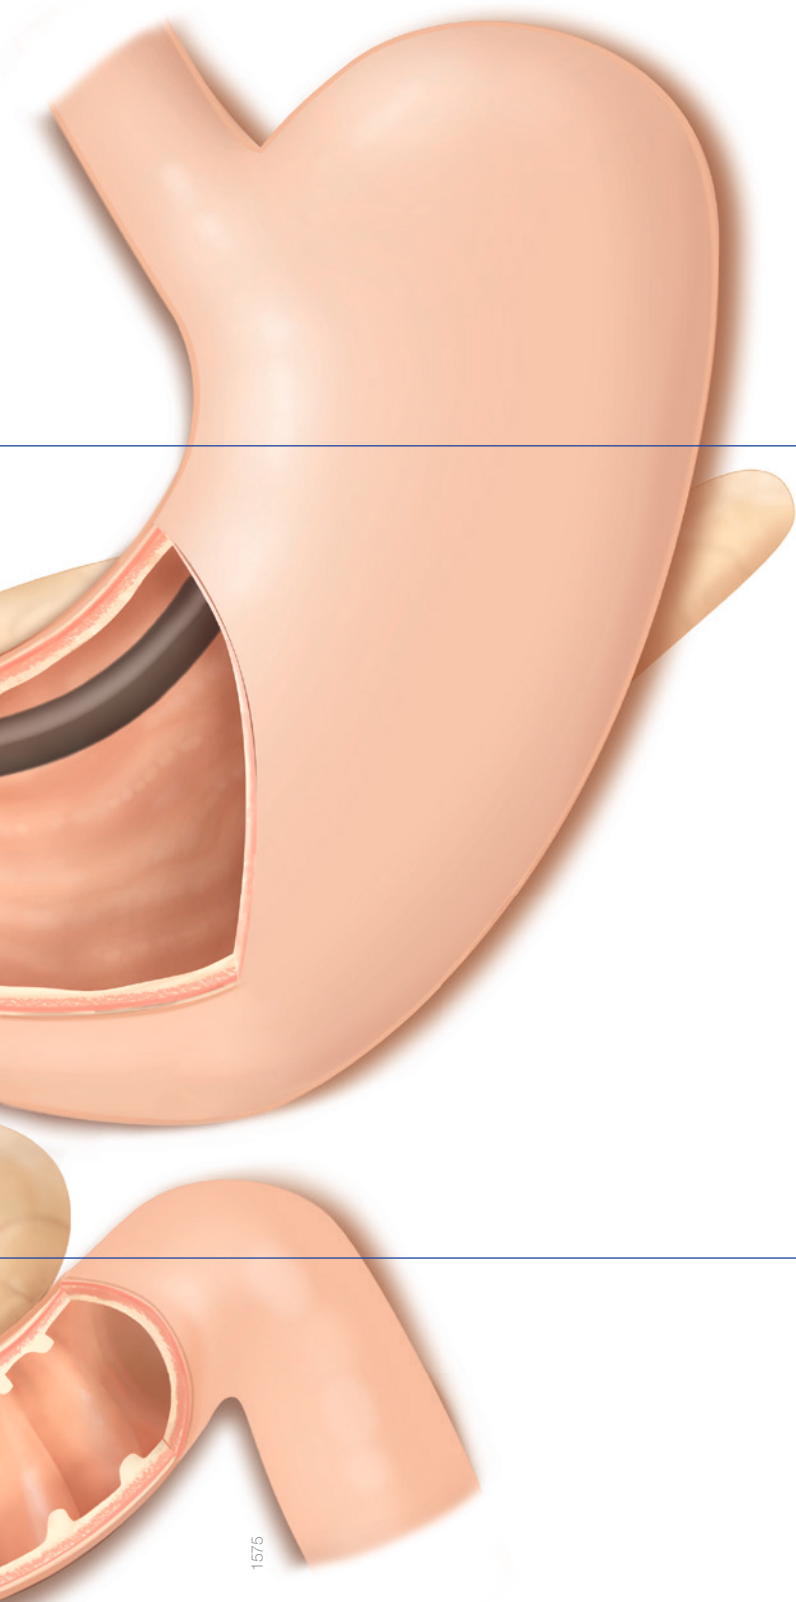

Superb Cannulation Performance

Primary cannulation success was significantly higher (up to 94%) compared with a fully hydrophilic and nitinol guidewire combination*.

VisiGlide could replace using a combination of flexible and stable guidewires and increase the success rate of cannulation while decreasing the procedure time.

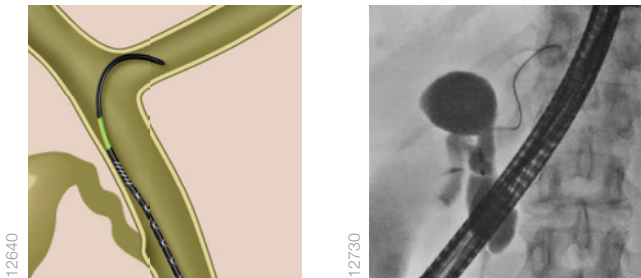

VisiGlide 2

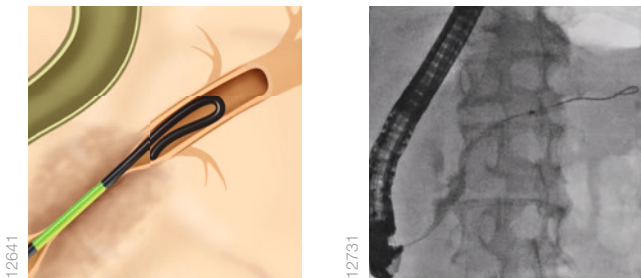

Selective Insertion

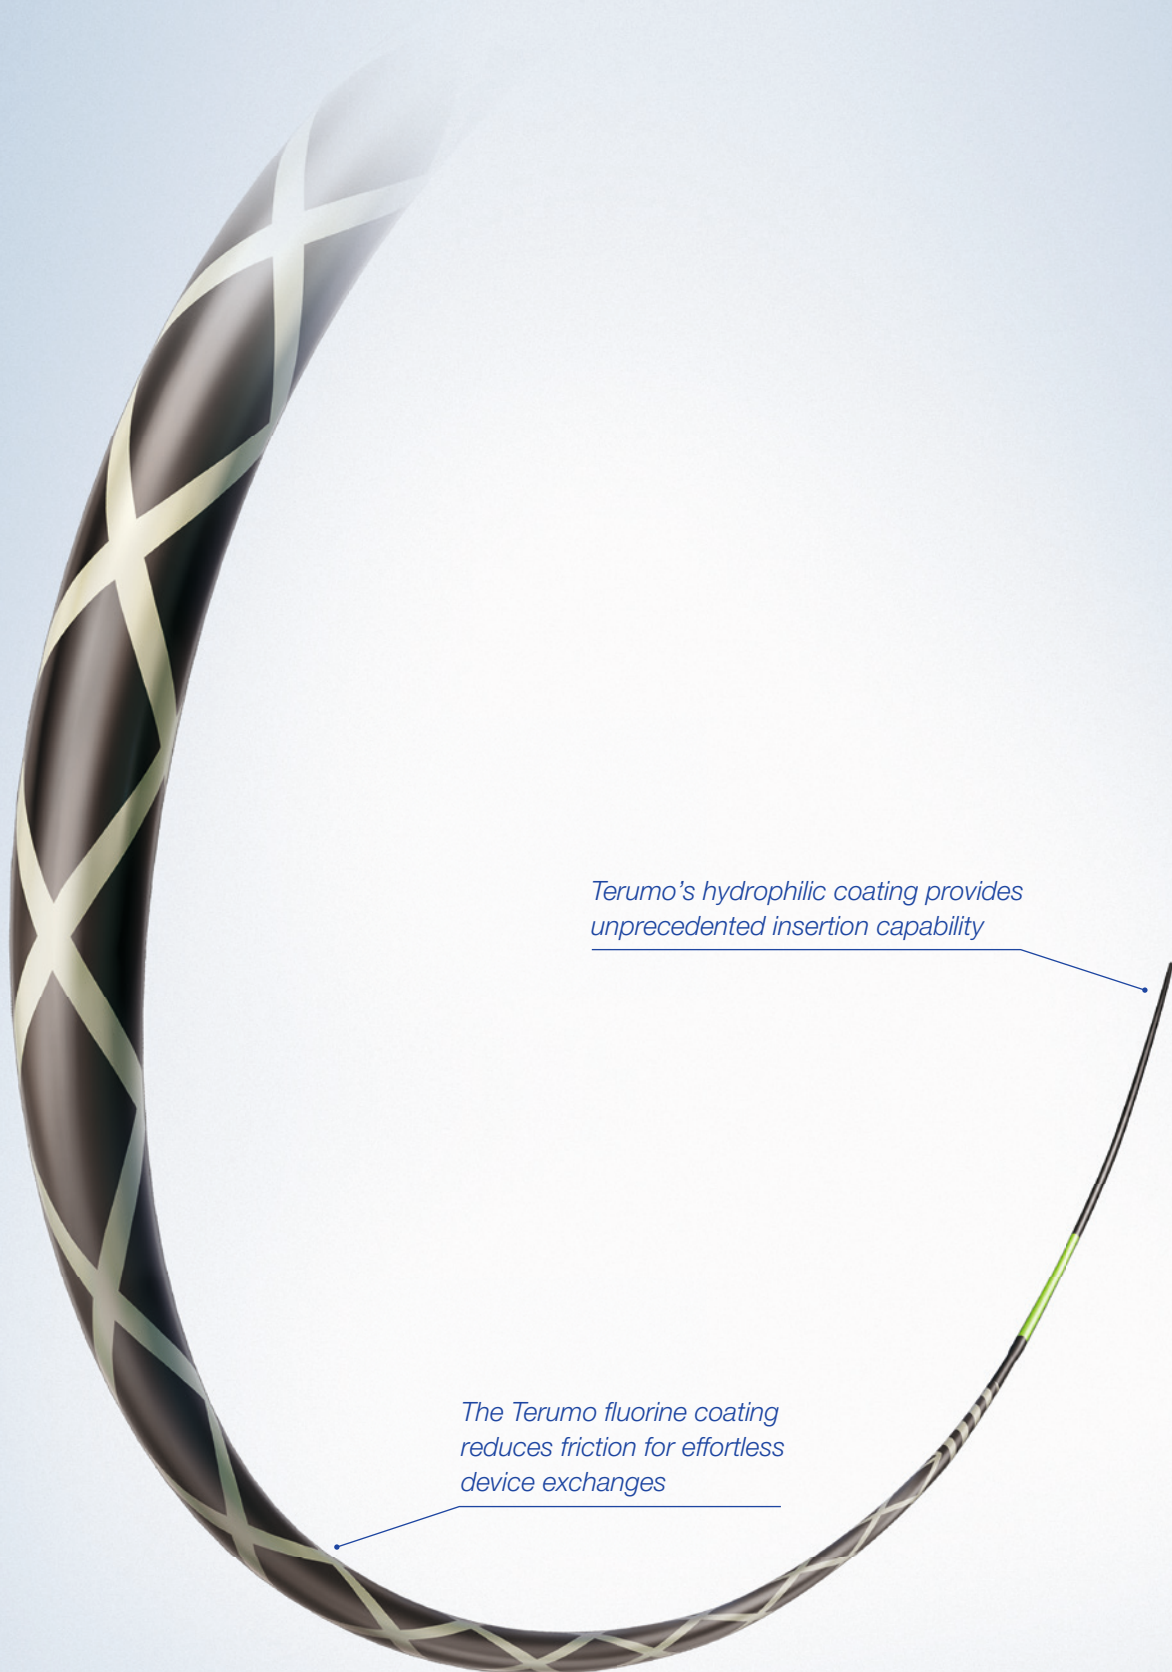

The shorter angled tip of VisiGlide 2 facilitates insertion into tortuous anatomy, which can prove advantageous in challenging anatomy and hilar areas.

Enhanced Flexibility

A slightly more tapered tip on the VisiGlide 2 allows the formation of an alpha loop and, along with the Terumo hydrophilic coating, promotes navigation of constricted ducts.

*Terumo's hydrophilic coating provides
unprecedented insertion capability*

*The Terumo fluorine coating
reduces friction for effortless
device exchanges*
