

Bronchovideoscope
BF-H1200

Going beyond the 5 mm Diameter Barrier with Native HDTV Image Quality

4.9 mm Diameter with HDTV Image Quality

Thanks to the incorporation of a newly developed micro image sensor, we were able to create a new HDTV compatible diagnostic bronchoscope with an outer diameter of less than 5.0 mm.

Advanced Suction Capability

Even more impressively, this slim scope comes with a bigger 2.2 mm instrument channel plus greater suction capability compared to the 2.0 mm instrument channel diameter of its predecessor.¹

Excellence in Ease of Use

Based on technologies which made its predecessor a highly valued tool in bronchoscopy, the BF-H1200 features a rotatable insertion tube that turns 120° in either direction for easier targeting and delivery or withdrawal of EndoTherapy devices.¹ A waterproof one touch connector enables quicker connection of the endoscope to the system.

Observation Modes

TXI (TeXture and color enhancement Imaging)²

Delivering a new ease and clarity of observation by utilizing brightness, tissue texture and color differentiation. Bronchoscopy is enhanced by a combination of brightness correction of the dark image areas and an accentuation of the observed tissue texture.

NBI (Narrow Band Imaging)³

The proven imaging technology helps physicians to inspect suspicious lesions. During endoscopic observation, NBI enhances the visualization of the capillary network and mucosal morphology.

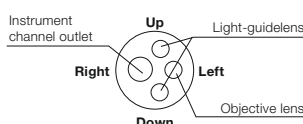

RDI (Red Dichromatic Imaging)²

Enhances the visualization of vessels in deeper layers of the mucosa. By using narrow bands of the red part of the light spectrum (long wavelength bands of 600 nm and 630 nm) which penetrate deeper into the mucosa, deep vessels can be displayed in stronger contrast and hence are better visualized.

¹ Olympus EVIS LUCERA ELITE BF-H290/Q290 bronchovideoscopes

² Requires EVIS X1 CV-1500 video system center

³ Requires EVIS X1 CV-1500, CV-190 or CV-190 Plus video system center

Specifications	
Optical System	Field of view 120°
	Direction of view Forward viewing
	Depth of field 3-100 mm
Insertion Tube	Distal end outer diameter 4.9 mm
	Distal end enlarged
	
Instrument Channel	Insertion tube outer diameter 4.9 mm
	Working length 600 mm
	Insertion tube rotation function Yes
	Channel inner diameter 2.2 mm
	Minimum visible length 3.0 mm from the distal end
Direction from which EndoTherapy accessories enter and exit the endoscopic image 	
Bending Section	Angulation range Up 210° / Down 130°
Electrocautery Instrument Compatibility Yes	
Laser Compatibility Nd:YAG	
Compatible Systems Olympus EVIS X1 CV-1500 video system center Olympus EVIS LUCERA ELITE CV-290 video system center Olympus EVIS LUCERA ELITE CLV-290SL, CLV-290 xenon light source
